

Angular - Route Guards

- Aditya Kumar
Chief Technology Officer, edwisor.com

We will cover with the following concepts

- 1) Concept of Route Guard
- 2) How to Write a route guard and apply it in a route.

The basic idea is to ensure there is no unauthorized access to the route

- 1) Write a service which implements CanActivate from Angular router
- 2) Use CanActivate method to write the logic of authorization
- 3) Add the service to your route
- 4) Angular will run this method before accessing the route

Use route guards only if its absolutely necessary
