Angular - Interfaces

- Aditya Kumar
  Chief Technology Officer, edwisor.com

We will cover with the following concepts

1) What is an Interface?

2) Interface as a type

3) Interface applied on a class

Interfaces are like code contracts, if you implement them, you must follow them

```
export interface ApiResponse {
    data: any;
    error: string;
    message: string;
    status: Number;
}
```

Lets try and write a similar interface for our chat message

These contracts can be applied to classes as well.

1) Let's check out the code of lifecycle hook

2) Lets try creating an interface of our own which can be applied to the class.

The next steps are ...

Route Guards
