Jquery Advance - Ajax Introduction

- Aditya Kumar
  Chief Technology Officer, edwisor.com

We will cover with the following concepts

1) Making request using Jquery Ajax.

2) Reading data from a JSON file

3) Displaying data dynamically on the web page.

Structure of a Ajax request is fairly easy to understand

Using jQuery ajax method

URL of external file that get with ajax method

Data Returned with calling ajax method

```
$(document).ready(function( ){
    $.ajax({
        type: "GET",
        url: "message2.txt",
        success: function(data, status) {
            -- do something here --
        }
    });
});
```

Run this function if getting data with ajax method is success!

Never forget to properly handle the important callbacks

1) Success

2) Error

3) Timeouts

Some additional functionalities are given to make your life easy

1) Do something before requests

2) Complete

Next Steps -

1) Making request to a Facebook API
